Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to work machine with reinforced boom member, classified in class 414, subclass 722.
- II. Claims 18-20, drawn to a method of reinforcing a load bearing member, classified in class 29, subclass 897.2.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method can be used to reinforce any structural member.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication should be directed to D. Underwood at telephone number (703) 308-1113.
